

Eren Tolga TEKIN

Paris, France — erentolgatekin0@gmail.com — +33 6 95 37 53 02 — LinkedIn — GitHub — Portfolio

Profile

Engineering student specializing in artificial intelligence, computer vision, and real-time data systems. Hands-on experience building AI agents with function calling, live video tracking pipelines, and streaming threat-intelligence infrastructure. Looking for a 2027 internship in AI/Machine Learning or Data Science, comfortable working in international, English-speaking environments.

Full project write-ups on personal portfolio (clickable link).

Core Skills

- **Programming:** Python, SQL, JavaScript, Java, C, HTML, CSS, TypeScript, Dart
- **AI/ML & Frameworks:** NumPy, Pandas, scikit-learn, PyTorch, YOLO, LLM APIs (Claude, OpenAI)
- **Data & Streaming:** Kafka, Spark, Airflow, Snowflake, PostgreSQL, MongoDB
- **Mobile & Backend:** React Native, React, Flutter, Supabase
- **Tools:** Git, GitHub, Docker, Power BI, DBeaver
- **Languages:** French (Native), Turkish (Native), English (TOEIC 890), Japanese (B1, ongoing)

Education

IT Engineering Degree (5-year program) — ISEP, Paris, France 2022 – 2027 (expected)

- Coursework: Information Systems Architecture, Cloud & Security, Databases & Big Data, Business Intelligence Tools, Artificial Intelligence

Academic Exchange — Inha University, Incheon, South Korea 2024

- Coursework: Computer Vision, Signals and Systems, Sensor Engineering

Projects & Experience

Project names are clickable and link to their GitHub repositories.

MyBelly — Nutrition & Inventory Tracking App

- Uses function calling (19 Claude tools) and prompt caching to manage inventory, meals, recipes, and profile settings from natural language
- Every request gets one of three risk levels: read-only, confirm-before-write, or slot-filling when something's ambiguous
- Common requests, like water or creatine, get resolved on-device instead of calling the API
- Runs offline-first on SQLite, syncing to Supabase in the background

Coldeye — Real-Time Urban Surveillance & Tracking System

- Real-time multi-object detection and tracking (YOLO + ByteTrack), assigning a persistent ID to each vehicle and pedestrian across the video feed
- Uses semantic segmentation (DeepLabV3, trained on Cityscapes) to label every pixel as road, sidewalk, building, or crosswalk
- Cross-camera re-identification (Re-ID) tracks a chosen target as it reappears on different feeds, plotting its path live on a React dashboard

GhostNet — ML-Scored Real-Time Threat Intelligence Pipeline

- Streams four public threat feeds through Kafka into a Spark Structured Streaming job for continuous low-latency ingestion
- Two trained models score every event live: a repeat-attacker classifier (93% recall) and an unsupervised anomaly detector
- PostgreSQL stores the full history, and a live dashboard tracks activity by country and attack type in real time

Carrefour — Retail Associate Mar. 2025–ongoing

part-time role balanced alongside full-time studies and project work

Certifications

- Google Data Analytics Professional Certificate — ongoing (Coursera)
- Machine Learning Specialization (DeepLearning.AI / Stanford) — ongoing (Coursera)
- Microsoft Azure AI Fundamentals (AI-900) — ongoing
- Kaggle — [competition name] (ranking to be added once achieved)
