Eren Tolga TEKIN

Paris, France | erentolgatekin0@gmail.com | +33 6 95 37 53 02 | LinkedIn | GitHub | Portfolio

6-Month End-of-Studies Engineering Internship (2027)

Education

Master's Degree in Computer Science & Engineering (5-year program) | ISEP, Paris, France 2022 – 2027

Coursework: Artificial Intelligence, Databases & Big Data, Cloud Computing & Cybersecurity, Systems Architecture

Academic Exchange | Inha University, Incheon, South Korea 2024

Coursework: Computer Vision, Signals and Systems, Sensor Engineering

Core Skills

- **Programming Languages:** Python, SQL, Java, TypeScript, Dart, Shell
- **Frameworks:** PyTorch, scikit-learn, Hugging Face, OpenCV, YOLO, FastAPI, Spring Boot, React, Flutter
- **Tools & Platforms:** Kafka, Spark, PostgreSQL, SQLite, OpenSearch, Docker, Linux, Git, pytest
- **Languages:** French (Native), Turkish (Native), English (Fluent, TOEIC 885), Japanese (Elementary)

Projects & Experience

GhostNet – Real-Time Data Streaming & Threat Intelligence

- Engineered a threat intelligence platform to classify malicious IPs from global threat feeds.
- Trained ML models using scikit-learn to predict repeat offenders with 93% recall.
- Built a streaming pipeline using Kafka and Spark to deliver live threat telemetry to a FastAPI and React dashboard.

AI Document Search Engine – Generative AI | Thales *Ongoing*

- Engineered a GenAI platform deploying LLM agents to search and analyze documents via RAG and GraphRAG.
- Integrated OpenSearch to combine keyword matching and vector embeddings for hybrid search.
- Compared and documented different search technologies to identify the best architecture for large documents.

Coldeye – Real-Time Computer Vision & Perception

- Engineered a multi-camera vision system to detect and track people and object interactions in real time.
- Integrated YOLO11 and ByteTrack to maintain persistent tracking and extract pose keypoints for behavior analysis.
- Built an append-only event engine in SQLite exposed via FastAPI and a Next.js MJPEG live stream.

LUCID – AI Safety & Guardrails

- Engineered a Python safety layer to protect AI agents from hostile inputs and tool abuse.
- Architected a three-stage pipeline to sanitize prompts, enforce tool constraints, and redact outputs.
- Built a deterministic safety engine adding sub-2ms latency with zero token cost.

Certifications

- IBM Machine Learning Professional Certificate
- IBM AI Engineering Professional Certificate
- Google Cybersecurity Professional Certificate
